cleaning with conscience

A new range of sustainable products from **nexon**

kinder > smarter > better

cleaning with conscience

Our philosophy is simple - create a legacy of products that are kinder to the environment and the hands that use them. Because we genuinely care about our customers and communities, and we have done for more than 50 years.

- Plant based to make the product 100% bio-degradable and kinder to the environment
- Extensively tested to deliver excellent infection control and cleaning performance
- Comprehensive range of products covers every area in your care home
- Multi-use products reduces the range you need to stock and train for – these products are actually COSHH free*
- Unique dosing packaging helps operatives mix accurately
- Concentrated products are diluted at site to reduce the environmental impact of transport
- Packaging is made from recycled plastics, which can be recycled

*COSHH free when in use

What is plant based cleaning?

n-kind products are created by utilising positive probiotics, so what are they exactly?

What are probiotics?

Probiotics are usually talked about in the context of food, and they're added to things like yoghurt for health benefits. They are often described as "good bacteria" since they are thought to help redress the natural balance of bacteria found in the gut when affected by illness.

That's in the context of food, but when we talk about probiotics, we are referring to the innovative ways we use them in cleaning products.

Ordinarily, people use harsh chemicals and corrosive cleaning products for cleaning purposes. Our range of offerings promotes a system that emphasises probiotics at the heart of the cleaning process. They clean with the environment, rather than against it – which is exactly what the corrosive nature of harsh cleaning products does. The result is a substantially deeper, longer-lasting and more natural clean compared to products that only use chemistry compounds.

Are probiotics safe around pets and children?

Probiotics are absolutely safe for children, pets and adults! They're found in entirely natural settings, and the ones we use are not harmful to people or the environment.

We use probiotics in our cleaning products because we want to move away from harsh chemical products to create something more organic.

So whether using our products at home or in a professional setting, you can always rely on their intended use and have confidence in the knowledge that they will never have any unknown or adverse effects on your health.

What does 'probiotic' actually mean?

We want to help pioneer using probiotics in cleaning products. It means that n-kind cleaning products contain living organisms, that have a positive impact on the environment around them.

They grow and become active and do lots of good things that chemicals can't do, such as working continuously, which in turn provides a deeper clean. Products are essentially fermented bacteria that is concentrated to create a cleaning product. Probiotics in cleaning are becoming increasingly important.

Why are probiotic cleaners better than harsh chemicals?

Probiotics work continuously, providing a longer, deeper clean, in contrast harsh chemicals only last a few seconds after application. We're improving safety by using probiotics in cleaning, making them easier to work with. They are less aggressive than chemical cleaners, which essentially try to lift dirt. Probiotics break dirt down into small pieces which are easier to lift. This results in improvement of cleaning over a longer period.
